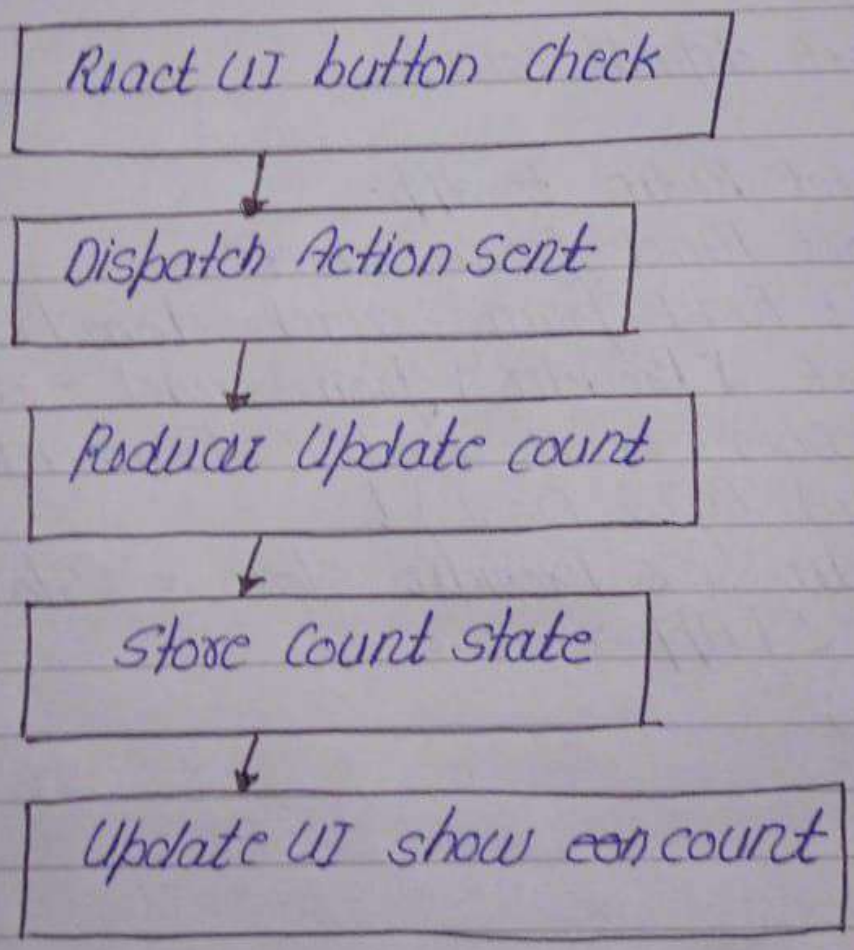
6) Use Counter in App

```
import counter from './location';
function App() {
  return (
    <div>
      <Counter />
    </div>
  );
}
```

* Diagram



Date:
Page No.

```
import {increment, decrement} from: / counterslice;
const counter = () => {
const count = useSelector ((data) => state.counter
                                        .value);

count dispatch = Use Dispatch);
return(
    <div style {{ text Align : 'center' }} >
  <h1 > counter : {count} </h1 >
  <button onclick = ic ) => Dispatch (increment)}
    </bth >
  </div>
  );
};
export default counter
```

5) Connect Redux to App:

```
import React from 'react';
import React from 'react-dom / client';
import {Provider} from react-redux;
React DOM. Create Root (document get
Element RyId (root')!
render (< Provider store = (Store)>
    < / App >
  );
```

Date:
Page No.

```
reducer : {
    counter : counterReducer,
},
});
```

3) Create counter slice:

```
import { create slice) from @reduxjs/toolkit;
const initioo state = {
    value : 0;
};
Const counterslice = create slice ({
  name : 'counter',
  initial state,
  reducer : {
      increment : (state) => {
        state value += 1;
      }
      decrement : (state) => {
          state . value = -1;
      }.
  },
  export const { increment, decrement } = counterslice
  . actions; export default counter slice . reducer;
```

4) Create counter component

```
→ Import React from 'react';
import { useselector, use Dispatch } from
'react - redux';
```

FRONT END ASSIGNMENT

Q Make a react app to make a counter which will start from 0 and 2 buttons with incrment and dicrment options and count will incrasi and dicrase on the basis of which button.

Ans. BASIC OBJECTIVES :-

① Create a Redux :- Based counter
- Initial app. 0 (valu)
- Two buttons :
  - Increment (+)
  - Decrement (-)
- Count updates based upon button clicks.

* Concepts Used :
- Redux Toolkit (@ reduxjs / toolkit)
- React - Redux (use Selector, use Dispatch)
- Centralized state managemnt.

* Steps to make app :

1) Install dependencies :
→ npm install @ reduxjs / toolkit react - redux

2) Create Redux Store :
→ Import & configure state} from @ reduxjs / toolkit;
import counter Reducer from :./ features / counter
export const store = Configure Store (a
